ISOLATION SUPPORT SERVICE

Isolation documentation is an integral part of providing all employees within a organisation with a “Safe System of Work”. Ensuring equipment has been isolated and verified “Dead” is a critical control measure prior to undertaking maintenance activities on processes or equipment.

Hatch considers the development of Isolation documentation as **Safety Critical**. The fundamental model shown below is used to ensure our team of professionals focus on the critical aspects surrounding a quality isolation document, this allows the team to develop documents in a effective and efficient manner.

OUR SERVICES

Our isolation support services include:

- develop isolation documentation utilising an existing site specific isolation management system.
- provide customised isolation documentation via **elsolation** which complies with current site document management systems.
- through life support of site isolation documentation utilising the **elsolation** tool.
- Site validation services to confirm isolation documentation integrity
- Skilled team supported by industry experienced electrical, mechanical & process engineers.

OUR EXPERIENCE

For over 20 years Hatch has developed Isolation documentation for clients globally. The team of technical writers have had experience in developing various forms of isolation documents within the mining and manufacturing industries.

Our Isolation Subject Mater Experts (SME’s) have undertaken rolls within organisations including Isolation Coordinators, Isolation Planners & Isolating Person’s.

elsolation

Hatch professionals utilise **elsolation** to capture & collate isolation point characteristics, develop isolation documentation and provide tailored reports for auditing functions.

The output format of the isolation document is customised and can be exported to suit client requirements in order to comply with the organisations own documentation management systems.
